

Group Exercise

- Join one of the table hosts for a discussion focused on creek corridors that you are interested in.
- Discuss with group members the following questions:
 1. What do you value most about City creeks and watersheds?
 2. What are the main concerns for you with the creek corridor that you are most interested in? With creek corridors Citywide?
 3. What specific types of projects would you most like to see happen?
 4. What type of information would be most beneficial to include in the CWMP to address your goals?
- Pick a person to summarize and report out on your group's discussion.

- 1. - paths, walkways
- property safety
- steelhead / fish passage
- SW detention / retention / FC
- WQ / homeless camps
- public safety, bank failure, people
- coordination w/ creek groups
- enforcement of 100' setback
- climate change / AR / episodic flooding
- WQ / illegal connectors, septic tanks?
- bike path + creek works synergy

- invasive species
arundo, ~~eco~~
eucalyptus,
ivy

5. Any ad

4. — long-term WQ monitoring
* id pollutants
- coordinate w/ agencies outside of city limits
- creek maintenance plan, potentially rotating - creekwide
- development of CIP + funding
 - * create funding mechanism
 - SB hotel tax
 - development impact fees
 - etc
 - delineation of public/private/city land across full watersheds

Water Quality

①

· Habitat diversity

· Interaction btw creeks + shore

· flood attenuation

· recreation

· Fish

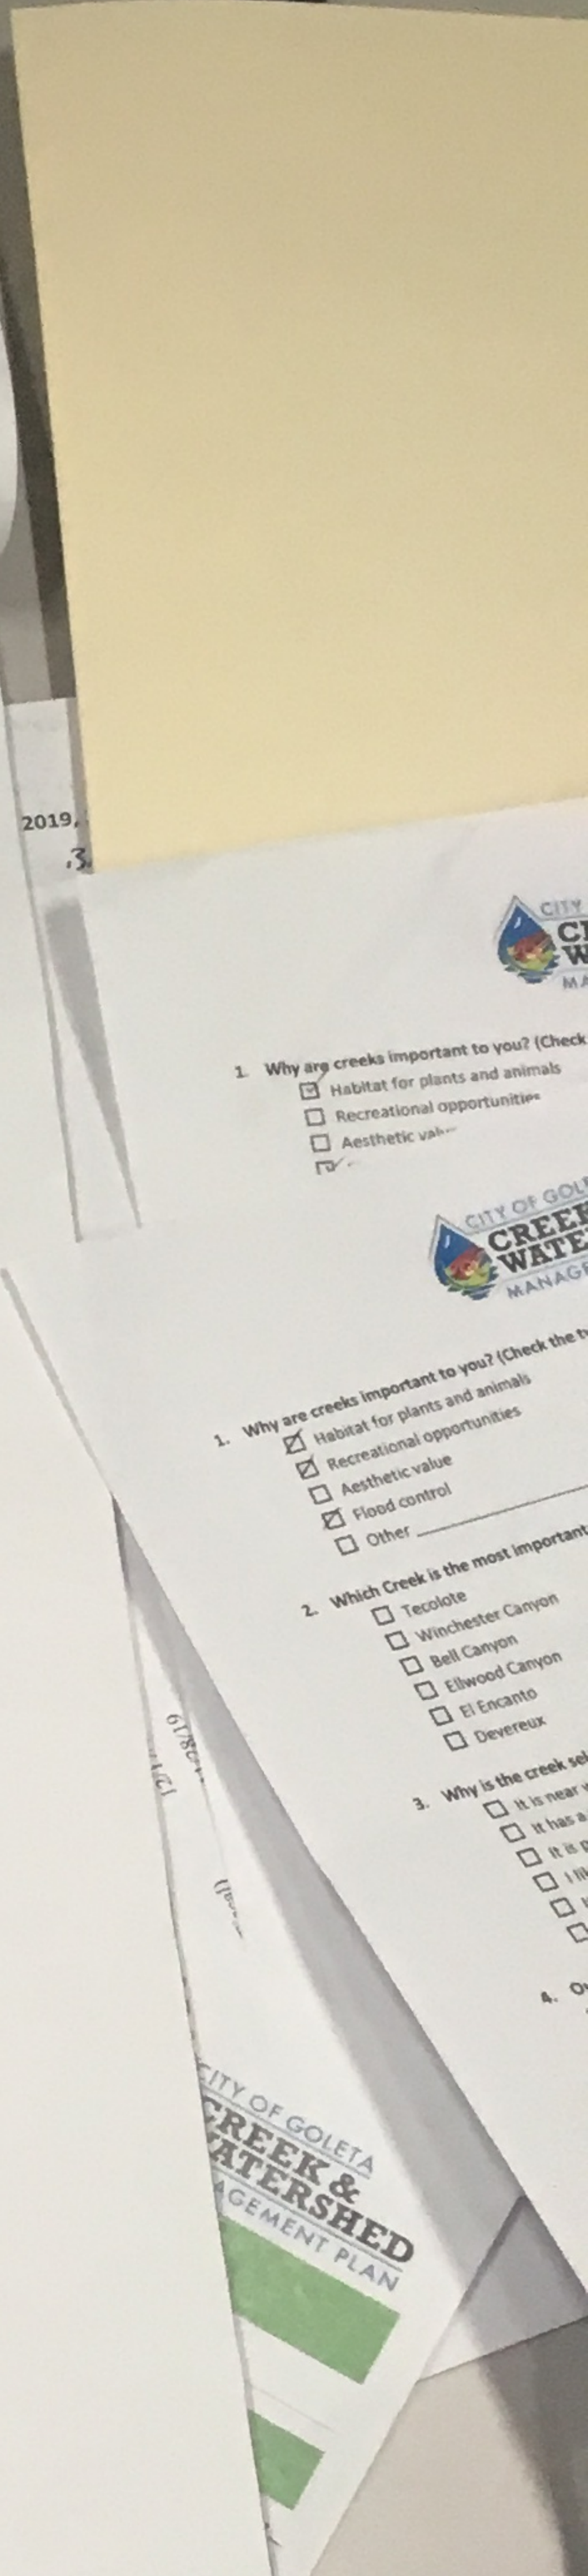

· Aesthetics

floods - disconnection from the floodplain

· encroachment of development

② Impacts of climate change and role of creeks in a changed climate

- Creek channelization
- fish barriers
- people experiencing homelessness
- pollution
- floods - disconnection from the floodplain
- encroachment of development

③

- modeling of future conditions
 - fluvial modeling and mapping
- removal of concrete channels
- removal of fish barriers
- habitat restoration
- land acquisition
- increased groundwater recharge opportunities
- biological monitoring
- interjurisdictional coordination

(2)

Watershed of future conservation
- training workshop my workshop
- Watershed of future conservation

- increased instream flows
- more trails
- ~~the~~ removal of invasive species
- watershed connectivity - sediment movement from upper watershed to lower watershed and beach; rebalancing
- funding a monitoring program for regular bio monitoring
- TOT or other funding mechanisms for ongoing funding

1. Why are creeks important?
 Habitat for wildlife
 Recreation
 Aesthetic
 Flood control
 Other

2. Which creek is most important?
 1
 2
 3

4. Out of the creek corridors, which is most important?

5. Any additional comments

CITY OF GOLDEN
 CREEK & WATERSHED
 MANAGEMENT PLAN

- more creek and watershed education
- disaster education around flooding, etc. in neighborhoods

~~Let~~ • Community engagement in habitat restoration

- analyses of fire risk
- soil moisture
- hydrology in foothills

Examples of successful restoration projects

Evaluative mechanisms

4. Monitoring info: WB, bio, sediment temp. etc.

• Historical conditions v.s. ~~present~~ present and future

• Modeling

- Urban / wetland interface
- analysis of fire risk
- soil moisture
- hydrology in foothills

• Examples of successful restoration projects

• Evaluative mechanisms

Handwritten notes on the top flap of the notebook, including the name "Thomson, J.D." and other illegible text.

- Identification of priority areas for restoration based on defined criteria, i.e.:
 - invasive species
 - recharge areas
 - erosion
 - wild life
 - corridor significance
- Neighborhood enhancement
 - habitat continuity / contiguity / to other valued areas / habitat vulnerability to flooding
 - multi-benefit projects
